45 lumen 0.6 watt 4-8 volt

Culot à vis (E10)

Référence: R5855578

Burnt-out bicycle light bulbs no more!

- The BackLightPro10 is the super-red bicycle taillight bulb for optimal safety.
- Replace the old light bulb of your bike with our high-tech LED bulb.
- The life span of our BackLightPro10 is up to 10 times longer than that of a usual light bulb.
- Even at walking speed the BackLightPro10 shines with double the intensity of a normal light bulb at full speed.

Drive safely and drive down your expenses!

- The BackLightPro10 of SYSTART GmbH is compatible with all bicycle lamp sockets and all types of dynamos.
- Normal light bulbs often burn out at full speed because the dynamo generates an excess of voltage. Our surge protector prevents overvoltage from damaging the BackLightPro10 as well as your headlight.
